

Analytical Specialist / Senior Analytical Specialist (Analytical team)

Job description

By joining Xbrane Biopharma AB in Solna, you will have the opportunity to join an innovative and growing team developing Biosimilars products. Xbrane is a growing company present on Nasdaq's main list. By joining Xbrane, you will be part of a journey to create a Swedish success story in biopharmaceutical drug development and ensure the access of biologics to an underserved patient population, enabling global health equality. The position as Analytical Specialist / Senior Analytical Specialist is in the analytical team which is responsible for developing analytical methods required for process development, product characterization, release and stability testing.

If you are the successful candidate, you will be responsible for performing analyses to support in-house activities such as process development, method development, and protein characterization. You will also be involved in introducing new analytical techniques to Xbrane as well as develop suitable analytical methods. You must be highly motivated, flexible, creative, and organized. You must be able to plan and work independently, but also, collaboratively, providing strong support to the team with your expertise within analytical and protein chemistry.

Responsibilities:

- Expand the analytical capabilities of the team by for example introducing new instruments and develop analytical methods
- Be a member of project sub-teams
- Compile and present analytical data
- Plan and perform analyses to support in-house process development and protein characterization
- Write study plans and reports
- Maintain analytical equipment
- Be involved in the development of analytical methods which will be used for control of Drug Substance and Drug Product
- Responsible for coordinating analytical work at contracted laboratories. This may include the monitoring of shipments, analytical activities and follow-up on relevant parts of the project budget
- Keep up to date with research and development relevant for successful analysis of biosimilar products

Qualification:

- BSc, MSc or PhD degree in Life Sciences or related field, depending on experience.
- Experience of the development and analysis of biopharmaceuticals, in particular monoclonal antibodies and related molecules
- You have experience in several of the following analytical techniques; HPLC, LC-MS, SDS-PAGE, CE, IEF, cIEF, ELISA, and RT-PCR
- You may also have experience of working with binding assays and cell-based assays
- You may also have experience of working with bioanalysis of therapeutic antibodies including develop and performing analyses to determine pharmacokinetics, antidrug antibodies, and neutralizing antibodies
- Experience of working in a GMP regulated environment
- Experience of technology qualification / validation of analytical methods
