

## Job Summary:

Now you have the opportunity to join an innovative and growing team within the development of Biosimilars. We are recruiting a Drug product and formulation coordinator for the team that wants to ensure the access of biologics to underserved patient populations globally. By joining Xbrane you will be part of a journey to create a Swedish success story in biopharmaceutical development.

You will be part of the Downstream Process Development team responsible for coordinating the drug process and formulation development. In this role you will focus on Drug Product and formulation in the biosimilar product development to prepare for future production. This includes management and oversight of external suppliers and coordination of internal and external activities during development and transfer of manufacturing processes from R&D to commercial scale.

Expect intense and interesting day-to-day interactions with our R&D team and CMOs to support the progress of the projects and when needed, you will act as a person-in-plant during studies or manufacturing campaigns. In a team environment with the R&D, Supply chain, QA and Regulatory Affairs team you will be coordinating DP and formulation development for future commercial manufacturing processes. You will report to Xbrane's Head of DSP.

## What You'll Be Doing:

- Lead and coordinate project activities at Xbrane and at our suppliers with focus on Drug Product and formulation development.
- Participate in defining Drug Product and formulation requirements and processes in combination with Delivery systems
- Participate in sourcing projects for Drug Product development services and Delivery Systems
- Write technical reports to document development activities and to enable tech transfer.
- Write and review process descriptions and batch records.
- Coordinate formulation and Drug Product process tech transfer in collaboration with Supply Chain.
- Provide technical support including document review, trending of process data, review of technical investigations and validations
- Provide expertise, educate colleagues and keep up to date in the field of drug product and formulation development

## Qualification:

- University degree in Life Sciences with several years of experience within pharma industry
- Extensive project management experience, including coordinating external activities and managing relationships with contractors
- Experience and knowledge in drug product and formulation development
- Experience and knowledge several of following areas: biopharmaceuticals, biologics manufacturing requirements, drug product process development, formulation development, process tech transfer, process validation, project budgets,
- Additional experience with drug substance and drug product manufacturing processes is meriting
- Experience from working under GMP requirements is meriting
- Proficient in English

### About you:

- You **get it done!** You have the ability to drive activities independently and proactively while being part of a team where we encourage each other in a dynamic, fast-paced environment. Transparency and honesty are important to you.
- Every now and then you **beat yesterday!** You use a flexible, creative, pragmatic and collaborative approach ready to jump in where and when needed. You use your creativity in problem solving, you are open-minded and there is no such thing as a bad idea.
- You truly believe that **impossible is nothing!** You have the ability to look at a problem from alternative angles, are open to out-of-the-box solutions and have a “can do” spirit. You are brave, persistent and like turning challenges into opportunities – for each problem there is at least one solution.
- You contribute to create an environment where **we win as one!** Solidarity and togetherness are key to our performance and well-being. You enjoy being part of a team sharing the same values and purpose, working together, giving trust, recognition & support as we grow as one Xbrane family – at Xbrane you will never walk alone.

### What's in it for you:

- You will be working with development and commercialisation of products in the fast-emerging field of biosimilars
- You will be able to contribute with your experience and expertise in a changing environment and will have the opportunity to learn and develop in your role as Xbrane grows
- You will be part of a strong, dynamic team and will have exciting days at work

### About Xbrane:

Xbrane Biopharma is a biotechnology company which develops and manufactures biosimilars. Xbrane has a patented protein production platform and world-leading expertise within biosimilar development. The headquarters and R&D facilities are located in Solna, just outside of Stockholm. Xbrane is listed on Nasdaq Stockholm. For more information see [www.xbrane.com](http://www.xbrane.com).
